
KEYMACRO lets you edit a keymap file. Its main purpose is to work with MOD files, or MIDI files in general. It lets you tweak a map, load a map, add notes to it, combine it with another map, export a MIDI file from it. You can modify and save it. You can import any file that is compatible with MODs (Microsoft's format for MIDI), and export it to MIDI files. Keymacro offers a helpful tutorial that can guide you through the interface, and more than enough functions for users to find out how to manipulate their files. If you're into MIDI stuff, this is the software for you. You can either add or remove the standard "Applications/Settings/Applications menu", or add or remove your own menu. Check out the video, it shows how to add or remove your own menu. In this video you will learn how to create an easy to use menu interface in Zorin OS 10.1 using xml files. Right click on any window to see the history of all of your mouse button actions. Use this script to see which windows have been focused or unfocused, and use which button(s) to click to activate.

```
#!/usr/bin/python from Tkinter import * root = Tk() root.attributes("-fullscreen", 1) label1 = Label(root, text="When you click a window, which button?", font=("Courier", 20), width=30, height=20, bg="white", fg="green") # label2 = Label(root, text="press escape to exit this program", font=("Courier", 20), # width=20, height=20, bg="white", fg="green") # label2.pack()
```

label1.pack() Images that are not required for the operation of the program can be excluded from processing. An image is required in order to measure the window size. A simple example on how to exclude the use of the image
