As early as the 1950s, Sternberg suggested that the most likely future directions of research in cognitive psychology. The study of the emotional and social aspects of human behavior, was gradually giving way to. the study of how cognitive processes are related to the behavior that they control. In the 1980s, Sternberg's interest in cognitive psychology was redirected toward the study of cognition and the way in which it changes with age. He suggested that the most promising future directions of research in the field of cognition would be. to focus on the mechanisms that underlie changes that occur with age. The twenty-first century saw Sternberg delve further into the relationship between aging and cognition. His exploration of how cognitive processes work in the elderly opens a new frontier in research. PubMed Article References Further reading 2d92ce491b
