Functionalized aminodioxo and aroyl-dioxolene-modified benzimidazole hybrids: Synthesis, anti-tuberculosis activity and molecular modelling studies. We report herein the synthesis and anti-tuberculosis activity of several benzimidazole-based hybrid molecules functionalized with aminodioxo and aroyl-dioxolene fragments. All compounds exhibited potent anti-tuberculosis activity with in vitro minimum inhibitory concentrations ranging between 0.0069-1.2  $\mu$ M. Compound 10 was the most potent one with a minimum inhibitory concentration of 0.0069  $\mu$ M. The expression of P2X7 receptor gene in THP-1 cells was evaluated and no significant difference was observed. The docking simulation results of P2X7 receptor, revealed that compound 10 bound at the active site and exhibited good interactions with the residues.

Q: What happens when the delivery person drops off a package at your door and you are not there? Lets say the post office delivers a package and they leave it at your door. What if you are not there at the time of delivery, but someone else is? Will the package be delivered to the other person or the sender? A: The only reason I can think of that you would expect it to not be delivered would be if you were told that the package was not to be delivered to anyone other than you. If you are not at 2d92ce491b
