In Angular2, how to register a service in my main module to be shared between other modules? I have an app.module and a main module. What do I need to do to share a service between these two modules? app.module

```
@NgModule({ declarations: [ AppComponent, ], imports: [ CommonModule, ... ], exports: [ AppComponent, CommonModule, ... ], providers: [ { provide: ROUTER_PROVIDERS, useValue: { router: RouterState } }, { provide: HTTP_PROVIDERS, useValue: { //use this if you want to proxy your services 'myservice': MyService } }, { provide: LOCALE_ID, useValue: 'en-US' }, //service to be shared by other modules { provide: SharedService, useValue: SharedService } ] }) A: app.module.ts @NgModule({ imports: [ // CommonModule, ... ], providers: [ { provide: ROUTER_PROVIDERS, useValue: { router: RouterState } }, { provide: HTTP_PROVIDERS, useValue: { // 77a5ca646e
```

Name2Ip2Mac Free

Name2Ip2Mac is a small tool which does not require installation. You can use it to convert computer names into IP and MAC addresses, and vice versa. The application does not include complex settings, making it ideal for users who are looking for straightforward software, including novices. Since there is no setup pack involved, you can save the executable file to any location on the hard drive and just click it to run. It is also possible to move Name2Ip2Mac to a USB flash disk or similar storage unit, in order to run it on any computer without prior installers. Administrative privileges are not required. An important factor to take into account is that the Windows registry does not receive new keys, and no additional files are created on the computer. Moreover, the Start menu is not populated with new entries. Name2Ip2Mac is wrapped in a small window with a plain structure, where you can input or paste a computer name or IP address into the dedicated box, and convert them to IP or MAC addresses with the click of a button. The software application has minimal impact on system performance, since it needs a very low amount of CPU and RAM. Unfortunately, the tool has not been updated for a very long time and it does not work properly on later operating systems (it hang every time we tried converting an address in Windows 7). Nevertheless, people who still use older Windows editions can resort to Name2Ip2Mac whenever they need to convert computer names into IP and MAC addresses, or the other way around. A four-time Oscar nominee who went on to act in a number of big-budget Hollywood films, including "A View To A Kill" and "Mission: Impossible", died on Saturday, according to his son. John Barrymore Jr. was born on 22 July 1919 in the London suburb of Kennington, where his father was a highly-regarded actor and theatre director. Barrymore spent most of his childhood in the United States where his parents owned a cottage in Newport, Rhode Island. He showed early artistic and musical talent and was educated at the Tabor Academy in Tabor, New Jersey. In September 1940, he was conscripted into the US Navy and served as a communications officer on board the US aircraft carrier USS West Virginia, for which he won the Bronze Star Medal. In 1942, he enlisted in the US Army Air Corps and was stationed on the island of Diego Garcia in the

What's New In Name2Ip2Mac?

Name2Ip2Mac is a small tool which does not require installation. You can use it to convert computer names into IP and MAC addresses, and vice versa.
