Category:Libraries in Milan Category:Archives in ItalyTaiping Hong Taiping Hong (; born 16 May 1954) is a Chinese-American computer scientist, technologist and the Anderson Professor at the School of Computer Science and Engineering at Georgia Institute of Technology, having joined the faculty there in July 2012. Hong has also spent time as a faculty member at the University of California, San Diego, the University of Texas at Austin and the University of Arizona. Biography Hong was born in Shanghai, China. At the age of 10, he and his family moved to Taipei, Taiwan, where he grew up. In 1973, Hong graduated from the Tsinghua University Department of Mathematics and then went on to get his Ph.D. degree in Computer Science at the University of California, San Diego in 1977. In 2007, Hong became the first Chinese-born faculty member in the School of Computer Science and Engineering at Georgia Tech. In 2011, Hong was elected as a Member of the National Academy of Engineering. He received the 2012 President's Award for Distinguished Teaching from Georgia Tech. On April 27, 2014, he was elected as a Fellow of the American Academy of Arts and Sciences. Selected publications Hong is the author of over 120 refereed journal publications. Journal Publications Cited by most cited publications. Other Hong is a Knight Science Technology Fellow, has won numerous awards for innovative research and mentoring, and holds a number of patents. [Evaluation of treatment for chronic borreliosis in Heilongjiang]. To evaluate the effects of rifampicin, doxycycline and ceftriaxon and combination therapy of them on chronic borreliosis. Sixty-four cases with chronic borreliosis were observed and treated with rifampicin (120 mg/d, 6 d per month), doxycycline (100 mg/d, 8 d per month) and ceftriaxon (2 g/d, 8 d per month) for three months. During the treatment period, the spirochete titer was tested by means of the reduction method and the reduction of disease and side-effects of drugs were observed. The spirochete titer of all the cases was less than 1 : 400 in the beginning, and fell into 1 : 100 - 1 : 200. The spirochete titer of 62 cases (93.75%) decreased by more than 90%. The clinical symptoms, signs and specific antibody were improved obviously, and the side-effects were slight. The spirochete titer could be reduced if the patients were treated with three kinds of antibiotics together. But the patients with fatigue, fever, proteinuria and subcutaneous pain had negative effects on the treatment. The long-time therapy may be not effective. The spirochete titer was reduced by 93.75% in 3 months. Nucleotide sequence of plasmid DNA from the tumor-selective replicon pOJ316. We report here the nucleotide sequence of a plasmid from the pOJ316 tumor-selective replicon. Based 570a42141b
